

## Global grids galore

Dennis Wheatley (February 2002)

Most dowzers are aware of the global energy grids known as the Curry and Hartmann Nets which cover the planet from pole to pole like gigantic fishnets. These grids were discovered by the German Doctors Curry and Hartmann.

Dr. Gunther Schneck has described, in an article in The British Society of Dowzers' journal, his investigation of five other global energy grids which are much larger than the Curry and Hartmann grids. He discovered that these grids relate to the architectural features of medieval churches, setting, for example, the locations of pulpits, altars, and wall niches.

Global grids took on a further exciting dimension with the discovery by an Oregon based dowser, Mike O'Doney. He decided to investigate a grid of 'love' – (don't laugh!) and found it existed as an energetic grid six paces wide between the grid lines. Surprised, he rang a dowsing friend and asked him to dowse for a global 'love' grid. He gave the friend no clues as to the grid's alignment or dimensions. The friend rang back and advised him he had found the grid, which was six paces wide.

Try finding the 'love grid' yourself, using a single rod in 'search'. Give the command "show me the alignment of the 'love' grid." The rod will then swivel and come to rest in one of the grid's alignments. Now make a straight dowsing pass in that direction with your mind totally focused on the 'love' grid lines, and you will get a reaction at each grid line. Now make another straight dowsing pass at right angles to the first pass and you will get another series of rod reactions. In both directions, were the grid line spacings six paces apart? Bear in mind that the global grids have differing dimensions at different latitudes due to the Earth's global nature. Confirm that you have discovered the 'Love' grid by information dowsing. Simply pose the question "Is this the 'Love' grid?"

Now dowse for other abstract grids such as a 'silver' grid. Again, you will find regular rod reactions in the grid's two directions. Dowse for other grids such as a 'gold' and 'antimony' grid, or whatever grid you like, and you will find their alignments and dimensions.

So, what does this mean? Are there a fantastic number of grids covering every conceivable material, or human emotions? Do the grids (actually) exist or are they 'potential' grids? By this I mean that if I think of a platinum grid do I create the grid, globally, by some process, or power, that I don't understand? If I create a global platinum grid will it last as long as the planet exists for future generations to find? If we each can create global grids, is this not a simply staggering concept?

In his remarkable discovery of the 'Love grid', Mike O'Doney has given a new insight into the nature of global grids which begins to border on the metaphysical.

Mike is a dowser of long experience and is a powerful author.
